URL:

Results after 10 minutes of testing:

100% CPU load almost constantly.

Other apps are slowed down and are temporarily suspended in the middle of some disk activity and other actions.

First run of Timberwolf resulted in Grim Reaper within 4 minutes and system froze preventing capture of a log.

Second run of Timberwolf resulted in Timberwolf window freezing after download speed test and a report that

stated this: assertion "p->id==SQLITE\_MUTEX\_RECURSIVE || amigaosMutexNotheld(p)" failed: file

"/src/mutex\_amigaos.c", line 135

I still don't think I can do much more than test Timberwolf. It's still too unstable to use as my main browser. For me this one isn't a release candidate.
