Posting now using Timberwolf RC1.

Cut and paste and Copy and paste work very well using the edit menu.

Scroll wheel seems to work now.

Using the vertical scroll bar works now. If I click on the vertical scroll bar and scroll down the window, the scroll bar is released now when I release the mouse button.

Caps Lock still does not work when I am typing comments, but that is not a show stopper.

If I use Timberwolf on my FFS2 partition ... too slow.

If I use Timberwolf on my SFS partition too slow.

If I use Timberwolf on my JXFS partition very fast but can't save more bookmarks.

As with the previous releases, I have insufficient RAM to use Timberwolf to its fullest potential.

However, I am very pleased with the improvements over Beta 4.
