As I installed RC2 for the first time my SAM 460 crashed before the main window has opened. As I copied libcairo.so and libsqlite3.so from RC1 into RC2 and delete the CurrentUserProfile it all works fine, except youtube clips has no sound and opening a page is slow. Cookies will be accepted in every session, bookmarks works fine too. Timberwolf is very stable. I use it for many hours without problems. This posting is made with my modified RC2. Youtube clips run much faster as in RC1. Random device is active on my SAM. I am sure the brothers are on the right way to complete their work.
