Synopsis:

VPDF is a fast and efficient PDF viewer done for morphos 3.0 and since then released as opensource. It is faster than APDF and have better comatibility with PDF format in general.

Nothing more to add imho.

Roman, this is VPDF description, not a project synopsis! I know what the program does - but I'd like to know more about what you're planning to do as part of the project. Do we get a "straight" port from MorphOS, or are you planning any OS4-specific features? The choice of GUI toolkit springs to mind as the very first thing. While MUI is generally OK with me, I do prefer (and donate more money to) projects that provide OS4's standard GUI.

Deadlines in amiga projects ?:) Are you sure that it make any sense to set some, just to broken it later with any kind of excuse?

Yes, I'm absolutely serious about deadlines and milestones. They are key information in any kind of project. How can I tell that a project is realistic (and thus worth supporting) if there's no timeframe at all?

Quote:

so we can't blame them that they lazy there, or slow there

No, I'm simply blaming them for accepting and opening a bounty for a project that lacks the necessary information.

No matter how busy/penniless/tired/whatever they are, they should have told you to submit a proper project.
