Try as Chris suggested:

```
netsurf -v
```

On CLI/Shell then you can see if its a TTF font that causes such crash. Move such TTF (and its .otag and .font) to another place and re-run FixFonts and then try again with netsurf.

I had the same crash and it was a TTF (Cinnamon IIRC) that coauses such crash, now netsurf loads fine.

But everytime I try to SAVE or USE prefs. I get a crashlog.

Will try to mark/copy and post it in netsurf web ASAP.
