I tried several dev builds. They all croaked with DSI error.

netsurf -v showed that it was hanging on URW Palladio fonts.

Launched ok after I got rid of the URW Palladio fonts ...

I have restored my fonts to normal and will use NetSurf 2.9 for now.

Update

For some reason, the dev builds don't like URW Palladio fonts..

Launched ok after I got rid of the URW Palladio fonts

but launched fine after all fonts were restored to normal.

Perhaps it finished scanning the fonts files after I got rid of the URW Palladio fonts

but I am not sure if it even scans the fonts files now after everything is back to normal.

It also crashes here with the URW Palladio fonts, but when I took them out and ran FixFonts it still crashes. I'll try removing all the fonts...

Update

After taking out all the .otag fonts it started to run but gave about 100 errors over the missing DejaVu fonts which also caused errors when rebooting. So I put back just the DejaVu fonts and am posting now from the nightly build.
