However still crashing in both method now (starting from WB menu or just double click from the AmiUpdate icon) :-/

Apparently I wasn't clear enough. The fix in workbench.library had nothing to do with any problems introduced by the just released AmiUpdate 2.25.

Until AmiUpdate gets a fix just do a rollback to whatever version you were using before. I rolled my AmiUpdate install back to 2.24 using the rollback feature and it's working fine again.

Ouch, sorry. I completely misunderstood 😞

I thought "wow, that was a pretty fast fix"...yet they had nothing really to do with each other.

Sorry again, rolled back and awaiting the fix
