URL:

68k Ibrowse is my main browser on AOS4 HW.

It is the fastest for me and sites like AW, os4depot, aminet.net, etc. works fully with it. I could pay for even faster native PPC version.

btw. it would be nice to have option to open some link to MUIOWB, netsurf or TW from IB.

btw. does amigans.net work fully on 68k Amiga?
