Hello folks!

I had AmigaOS 4.1.2 running on my AmigaOne XE G3 and my wireless Network card

http://amigakit.leanancomputing.com/c...?cPath=32&products_id=158 working fine with prism2.device and WEP encryption.

However after the update it seems that my Internet conneciton is lost.

I suppose that I should chekc out with latest prism2.device:

<http://www.os4depot.net/index.php?fun...driver/network/prism2.lha>

Can someone confirm this? That the older prism2.device is not working with 4.1.6 and that the new one should be used?

ps. On Os4depot.net I can not find the older prism2.device version, only the one added on 08 Jan 12 exists.
