Have you tried with the latest release version of OS4.1? It could be a problem with the beta.

If not, the next thing I'd suggest is upgrading the firmware on your wifi card; there are some dodgy versions that give connectivity problems. I've been using v1.8.2 successfully on my 3Com card since v2 of prism2.device was released. The recommended version is v1.7.4, but I couldn't find any reason to not go to the higher one.
