URL:

heh... I did have Roadshow configured to use a fixed IP address. Figuring that maybe the router didn't like that with wifi, I changed to ordinary automatic DHCP and the SAM stayed online for almost an hour and a half.

progress?

The other thing I noticed was the type of response I've been getting from ping when I leave it running and the connection dies:

ping: send to: no buffer space available.

What buffer?

I guess I should try booting off a public system (4.1.5) to see if it makes any difference.

Thanks,

PJS
