Only that it of course will be cross-platform and for everyone and all amiga like oses).

ps. Tested your amigaamp buttons, nice :)

That is if you have a browser that works with it. Timberwolf is just too unstable here for regular use 😞

I'm sure I'm not the only one who doesn't have a PC, My macs are unsupported for years now and less and less sites work on them (I've only turned one on once in the last six months). Classic users have no chance of SF access etc. but I will close the ML.

@all

I've thought of a little trick to get 24 bit button banks and startbars in dopus5, it doesn't work with the lister toolbar though.

Combine the icons and images you want into a picture then create an empty transparent 3d frame with iconedit, set the bank/bar background to use the image and use the same frame for each button. You can't change the image when you click on it but the frame will invert for some visual feedback.
