Wow, that was fast to provide an ocm enabled program!

It's easy to do - it's just memory allocation using a different function.

Quote:

But the result is the other way around. First the ocm version, then the standard one:

< Clock rate: 3.0620 MHz

> Clock rate: 23.787 MHz

Hmm, that's not right.

Did it feel as if it was running that slow? It might just be misreporting.
