No, there's only one instance of CopyMem and that's something to do with bitmaps (nothing to do with what I've put in OCM). I checked the entire source for memcpy too and found four instances, three of them related to loading files off disk (so not relevant) and the fourth was something to do with screen updates (and didn't seem to be touching what I'd put in OCM).

edit Hmm, could it be alignment related? I'm putting a structure into OCM, and then poking individual values, but it's all on default alignment (whatever that happens to be).
