@all

Alignment issues also fixed.

Is anyone else in interest to join us ? Any skilled developer is very welcome.

The harder part done already, now we only need to migrate main binary and modules to 68k-gcc, and then porting to NG will be pretty trivial.

Anyone can get branch/branch_v1 from SF page, go to Library directory, type "make", and library will builds (of course, if you have setup 68k-gcc on some crosscompiler, together with all necessary additional includes and libs: they all also in Branch directory).

Now, we need to cleanup library, fix some parts, rewrite hooks to SDI as well, and so on. So any skilled developer is very welcome. I will easily help with setup all necessary 68k crosscompiler parts (all can be done in 20 minutes) to works on it. I also always online and didn't hold answers for a weeks, so you will be in interest to works fast.

Once we will finish up with cleanup of Library code, we will port main programm and modules to 68k-gcc, and then, when everything will be on gcc , migration to any NG os will be more or less easy (to say truth, i almost compile native os4 library yesterday, just with few single changes).

So, check that topic:

<https://sourceforge.net/p/dopus5allami...sion/dev/thread/44afb312/>

And check commits:

<https://sourceforge.net/p/dopus5allamigas/code/log/?path=>

Any skilled developer who can spend some time in a evening pretty welcome.
