Native library with all the fixes now done. Only one small bit left: need add 68k traps to the workbench patches , so they will works just like they works in os3/68k version of library. As Itix says, for OS4 this 68k approach is not 100% correct and we should use SetMethod() instead to patch interface directly and not library vectors in front of it. However if we "just" will add 68k traps, all will works the same as from 68k library.

In other words, in next days new archive with new 68k, os4 and maybe mos library will be done for some heavy betatesting. For aros version there is need to wait till everything will be native, as we now use those 68<->ppc emulation stuff to do tests.
