What to say, I am just impressed, all it's working almost well and the speed it's very acceptable.

Now some little glitches:

the problem with the tooltips (see samos' post) seems happening only if you move the mouse fast and one tooltip it's still open when a new one comes in, in this case if the first one it's shorter than the second one, only the part for the first lenght it's correctly displayed, the rest doesn't contain text and it's not with the yellow background.

Now the browser, if I use the native fonts I get many font not found message on the console, and many text it's displayed with ????, maybe it's only a setup problem, with the native menu the bookmarks are not displayed correctly, only the first 2 items are displayed ie. "show all bookmarks" and "add bookmark".

P.S. this post it's with Qt browser 😊
