Keep up the good Work I am sure I will look forward to trying your next OS4 release on my little sam440ep and hopeful using it under AROS on my Raspberry Pi at some point in the future.

It good to see all Amiga camps working together for a change especially as I use most of the Amiga Flavours as they all have their advantages and I prefer to use the right tool for the job rather than argue over which tool is more useful.

Now back to playing Lotus on my Minimig for a bit 😊
