Paragraph formatting in Abiword.

URL:

I do routinely create .rtf documents under Wordworth, then spellcheck and finalise them as .doc documents under Abiword.

Under Wordworth, you can format a paragraph to have this effect;

A Start of paragraph
continues here
and more.

by having a given left indent and the same but negative indent for the first line.

Abiword renders the paragraph correctly but as soon as you edit the paragraph the effect is lost.

Selecting the paragraph under Abiword to see how Abiword recognises (and defines) this formatting does not give a clue.

There is a possibility to give the same kind of indents, but it seems Abiword does interpret negative values for first line as zero.

Is this intended behavior ?

Is there an Abi formatting possibility, giving the same effect, that i overlook?
