by having a given left indent and the same but negative indent for the first line.

That is a hanging indentation. To do that in Abiword you have to open the Paragraph options. There you'll find a "Special:" tag and below it you can select "Hanging" from the list and set the space under the "By:" tag.

Edit:

Here is a screenshot from [Abiword 2.9.2](#) for Linux. Hope it is the same for your version.
