@Fairdinkem

we need some good programmer who port the WebKit last version browser to AmigaOs4.

I have it on my Powerbook and it is 100% compatible with all website plus is fully Html5 capable and have a video decoding inside.

About flash player there is most hard, apple G4/G5 have the old 10.1 version and some hacker make it working like (last version) but we on amigaos and related dont have any official Flash player from adobe or macromedia... this is the big problem
