Hi!!

I'm porting an aros program i wrote to Os4.

1) I use cybergraphics functions, like readpixelarray and writepixelarray with RECTFMT\_RAW.

2) For mousewheel i use NM\_WHEEL\_UP (RAWKEY\_NN\_WHEEL\_UP) from "devices/rawkeycodes.h"

But trying to compile the project in amidevcpp it gives that both of these don't exist.

Any clue about them? Thx!!
