Is it possible somehow setup richeditor.gadget so i will be able just mark columns like this: hold any button i choice and move mouse will mark columns/blocks for me ?

Currently its just a bit hard to mark columns from mouse for easy and fast cutting: i need to press rshift+ramiga+b combo, and then mark columns by cursor keys. But will be good to just mark blocks of text as you wish when just hold some button.

Like for example in any win32 editors: you just hold alt and while you hold it you can mark by mouse any kind of blocks. And vertical, and horisontal, and whatever you will mark. Starting poin of block to mark are where user press by mouse while holding alt, and while he hold alt and move mouse in any directions he can make size of marked block as he wish, in any directions, etc.
