How fast does your implementation compares to the FUSE driver on Linux on the same computer in terms of performance?

I don't have Linux installed on my Sam so I can't do this comparison but one of the beta testers might be able to.

Kas1e did however do some speed comparisons with CrossDOS and the tests showed that it's very slow when dealing with many small files but it's more than twice as fast as CrossDOS when copying just one big file from RAM:. The bad performance with many small files is as far as I understand something that also Linux users are complaining about and is likely because of the reverse engineered nature of NTFS3G.
