Yes I have seen that, is there a EXT4 version PLANNED?

According to the link you mentioned Fuse-Ext2 has some kind of experimental Ext 4 support which is not mentioned in the readme, so that should (hopefully) be working in the port as well.

Also once filesysbox gets released publically it will be possible for anyone who is interested to do FUSE file system ports with it or even write new file systems from scratch.

Quote:

Why bounty? Wasn't this mentioned at AmiWest as part of AmigaOS development we pay OS for?

If you had paid enough attention you would have also heard that filesysbox and NTFS3G are not Hyperion projects. They are included simply as contributions.

As Steven Solie paid for these two projects out of his own pocket I don't think it's reasonable to expect him to do that again. Anyway, donating to the eventual (?) bounty is optional. If you don't want to do it then just don't.
