You who have reported bugs and quirks, please try again after update (have you experienced crashes, please reboot as well).

Tested in terms of 2 bugs we noticed (non working from root of partition, as well as non working of [jtelnet](#) after connection): both bugs still here. I.e. when do run it from RAM: its the same can't found path, and when do run [jtelnet](#) from RAM:test/, then it connect, but do nothing after i type in "login" admin and hit "enter" (just in case: on win32's java it works).
