I've looked at it, but not very thoroughly. I do however think that I might have experienced a similar problem, and it has something to do with how I read stuff from the console.

I had a [telnet client working](#), have to see if it still works though.

So, I think it's a problem with JAmiga, and not jtelnet. I quickly looked at the console stream reading code of jtelnet, and it doesn't seem to be doing anything utterly quirky. So it should work. I'll keep investigating.
