Or , our console need an option "translate LF to CRLF" (if that is case there of course). Or, there should be some "Term" environment which do so (i tried yesterday amiga, amiga_h and have no luck). Any other ideas ? I also tried to do connect from "sh" with all those terms too, and have no luck.

Having a "translate LF to CRLF" would get my vote. Alternatively, a special terminal that has this feature would be fine too.

I just tried using the FKey commodity to insert "\r\n". Alas, the \r got translated to \n somewhere (probably by the console). I confirmed this by looking at JAmiga's debug output; it clearly showed two \n characters (hex A) being sent instead of \r\n (hex 0D0A).
