"However it would be great if it inherited the datestamp of the original image."

Ah yes, I never noticed that you are right...but as I recreate a picture to make the rotation...

You'd need to read the datestamp before rotating, and then put it back afterwards. Not sure how much hassle that is.

Quote:

Chris, I sent you a mail yesterday evening, did you received it ?

Yes, but it arrived too late for me to do anything about it, I rarely get up early enough to do anything in the morning and am still at work at the moment...
