Sam440ep video output question

URL:

I've got a Sam440ep (non-flex) to use while I'm away from my own machine, but I'm not getting any picture out of the M9 chip's VGA output (I'm using ACube's VGA cable plugged on the internal header). The DVI output seems to be working but as my monitor doesn't support DVI, I need to get the VGA working. Does the Sam need activating/switching the VGA output somehow?

Thanks for help or ideas.
