URL:

the 4 dockies are on OS4Depot.

For CPUDock,

1) many thanks to

-Juha Niemimaki for the CPUWatcher sources (very useful).

-Javier 'Jabirulo' de la Rivas and 'Alex' Balaban for their coding helps

-Roman 'Kas1e' Kargin for the tests

2) it doesn't work on Pegasos2, the CPU workload % is not accurate with this docky.

if Pegasos2 is detected, a requester will popup you (removable by tootype FORCE\_PEG2)

Tested succesfully on X1000, SAM460, SAM440, AOne G3 and G4... only failed on Pegasos2...

3) remove your other CPU monitor docky before to try / use this one
