@Valiant

I am yet to see such behaviour here on my public test machine.

If someone could narrow down why this is happening, I would be grateful.

Basically, the tab images are the cancel, cancel_s and cancel_g in the "images" directory in the CodeBench directory. They can be copied over from a previous install, or from the distribution archive. I have no idea why they are suddenly missing after the update, there is nothing in the installer that removes them.

The worrying part is the "system update" you said you applied before the error happened. Could that have been the png.datatype?
