@Mick

I use the latest ffmpeg snapshot (that one which we discuss with you week ago), which about the same as Fab use in 1.23, so i think the lines he post should works on version i have, just maybe something changes somewhere ..

Also libavcodec.a of 20mb is seems a bit big anyway.. Just want somehow to make it all in bounds of original mos binary (i.e. 50-60mb with mediaplayer), not something around 100mb :)

@Fab

Which version of icu libs you use for now ? I just checked icu downloads, and last one are 52.1 and size pretty fat as well. In 1.17 readme i see you do update to ICU 4.9.1 is it version you use now ? Also that "the data files are now stored externally in PROGDIR:resource/icudt49b/ to save some memory. Make sure to copy them if you update (a requester will warn you if you don't).", so it mean some specific changes in code of libicu too and if so, can you share them too ? I can of course build version 4.9.1 all statically, but binary will be again bigger then..
