While non working sites is possible (will check that tomorrow and compare with 1.17 version on morphos), still i can't understand what you mean by "does not open search results from Google result lists!". There is 2 ways to use google search: type google in url and search in google what you need, or , use fast-search on right top area of browser : both of them works of course, they do search in google, show you list of result, you press on any of them and it opens in new tabs or how you wish or open them. Where you have blank pages ? When you do what ? (for me of course all works). Did you install odyssey normally ? i.e. full fresh install from scatch without mixing with previous versions or any files from. Did you have latest mui updates ?
