I think i got why it crashes: libpng12 should be used everywhere, and not libpng14. So i recompile cairo and pixman to use libpng12 instead of libpng14 (that was reasons to link whole odyssey with libpng14 now), as well as ported fresh libpng12 1.2.50.

Also i just tried to link against libicudata stub library, and yep, it did the trick, binary now about 60mb. Need some time now to clean those things a bit.
