Recompiling of everything with png12 fixed png-decoding problems as expected, and now owb quits because didn't found calltips.mcc (so can't create class autofillpopup). Good news is that Thore works on that class already, and that i can see in snoopy log that icu resources loads fine (what mean, my 1kb empty libicudatastub.a are fine).

For now will update curl, xml2, xslt, jpeg, rtmp, freetype, expat, openssl to be recent ones and debug-symbols-free.

Also still will be nice if anyone skilled enough can just re-implement spellchecker.library. It have just 3 functions:

Quote:

```
APTR OpenDictionary(STRPTR, struct TagItem *ti);  
void CloseDictionary(APTR);  
STRPTR* Suggest(APTR, STRPTR, struct TagItem *ti);
```

Library done by Antoine Dubourg a.k.a. Tcheko, i can try to write him, but not sure if he will want to share code (i think as it in the mos now, even if he want he can't).
