Still the mass storage mode works with latest AOS4.

Just noticed that AOS4 fails to boot when the phone is connected via some of the SAM440ep-mini's internal USB header.

To me it looks like kickstart tries to boot from USB.

And as both SD drives (built in and user added SD card) appear with same name (NONAME) some legacy AMiga apps (like DOpus) fail to understand the correct path.

File access via WB works ok anyway.
