Thanks mate, meanwhile i have another question for you :)

Just now i noted that when we press the middle mouse button (to scroll in a page) we doesn't have the corresponding arrows once we point our mouse into another direction, but just the main mouse pointer anytime and everywhere

Just now I retested the old Reaction OWB and i see we still have any type of different pointers there, see the content of this archive:

<http://www.sendspace.com/file/fo52cz>

Eventually can you use them, can be usefull for you ?
