In your FastFix1, when Javascript webpage is loaded (<http://www.google.fr/webhp?nord=1> or <http://fr.yahoo.com>) I have a requester "Hello Google" or "Hello Yahoo France".
Maybe a debug somewhere ?

Seems you just enable Hello.js in scripts.

By curiosity, for you, when you watch YouTube video (for example, your Dead Kennedy sample), is your CPU always at 100% ?

For me 100% all the time, yes, but in 240, and no youtube.js, just with ie10 spoof, it play pretty ok (but with 100% loading).

Do you have a curl binary from the Curl library used in Odyssey 1.23 that I can test ?

Nope, but can build one, give me few mins
