URL:

Problem with URL Prefs.

1.23 (fastfix1) don't work fully with the URL prefs from OS4.1

I have set everything accordingly to use ODYSSEY and the browser do get opened.

But when i click on a link in YAM or WookieChat the link itself is never sent and used and i end up with a new window of Odyssey on the about:blank page.

This worked perfectly with OWB 1.16.

My settings are:

FILE

Active	Client Name	Client Path	Commandline Format
Checked	ODYSSEY	APPDIR:ODYSSEY	"URL=*"file://%s*""

HTTP

Active	Client Name	Client Path	Commandline Format
Checked	ODYSSEY	APPDIR:ODYSSEY	"URL=*"http://%s*""

HTTPS

Active	Client Name	Client Path	Commandline Format
Checked	ODYSSEY	APPDIR:ODYSSEY	"URL=*"https://%s*""

MAILTO

Active	Client Name	Client Path	Commandline Format
Checked	ODYSSEY	APPDIR:ODYSSEY	"MAILTO=%s"

WWW

Active	Client Name	Client Path	Commandline Format
Checked	ODYSSEY	APPDIR:ODYSSEY	"URL=*"https://www.%s*""

Has someone managed to make it work and see where the error is, please?

Plus is there a possibility to let a running Odyssey open the link in a new TAB instead of a new window?

Something like "NEWTAB" added to the Commandline?

Thanks a lot
