@Raziel

I don't know how these OS4 URL preferences works, considering i don't see any of the required parameters for Odyssey, but anyway, Odyssey has proper OpenURL support, and you can see the related configuration in OWB.readme (except the OWB port name has been replaced by Odyssey in the OS4 port, to support the deprecated Reaction OWB port).

I quote from the readme:

- OpenURL configuration

Rexx Port: OWB

Show:SHOW

Screen To Front: SCREENTOFRONT

Open: OPEN NAME="%u"

Open in new window: OPEN NAME="%u" NEWPAGE

So if something doesn't work, it's down to these URL preferences.
