The Rexx port name has changed to ODYSSEY.x, apart from that i know whats in the readme, i actually read through it before starting Odyssey 😊

I did a small rexx script to see where my problem arise from and this

```
/* */  
address ODYSSEY.1  
OPEN NAME="http://www.google.com"
```

doesn't do anything, so either i'm missing something or the rexx part is broken

Not completely broken, though.

Adding a "SHOW" will make the Odyssey window become active, but it won't change the site...help
