I apologize again for using your personal e-mail a few minutes ago. It turns out I am able to get on to Amigans.net via Timberwolf. (Unfortunately, I cannot paste my mis-sent post in, so I retype.)

Your Refresh-All-Caches.bat suggestion worked like a charm. But I still have to click "Get" when Sylpheed comes up in order to get my new Usenet posts. How can I fix that?

Is it safe to copy missing software (AbiWord, GNumeric, etc.) from my other installation of AmiCygrix, or should I try to figure out how to reinstall it all?
