I apologize again for using your personal e-mail a few minutes ago. It turns out I am able to get on to Amigans.net via Timberwolf. (Unfortunately, I cannot paste my mis-sent post in, so I retype.)

No problem. Everyone is invited to contact me by this mail address.

Your Refresh-All-Caches.bat suggestion worked like a charm. But I still have to click "Get" when Sylpheed comes up in order to get my new Usenet posts. How can I fix that?

Great!

Please choose the menu item "Configuration/Common Preferences" and activate "Check new mail on startup".

Is it safe to copy missing software (AbiWord, GNumeric, etc.) from my other installation of AmiCygrix, or should I try to figure out how to reinstall it all?

I recommend to install these programs using the original packages you can download on OS4-depot. Copying these packages by hand from an older installation is not a good idea. It is not enough to copy the corresponding directory in "Cygrix:Software", but you can copy your personal data you may have in these directories.
