I've had similar problems. I would get an error during system boot saying "can't add qt:/lib to sobjs:". I tried running the command manually "assign sobjs: qt:lib/ add", and would still get an error until the second or third time.

Even when the command succeeded, the path would not really add. I tried copying all the qt:lib/ into sobjs: but still ran into problems. I'll go back and trouble-shoot again when I've more time.
