I think your getting confused by the text output, there is no Re-size gadget on cgx\_wpa.

You will get the same kind text output on composition version, because its based on cgx\_wpa, don't let it confuse you.

Pressing Resize gadget and F here, make the video looked zoomed in, I think it changes the image\_width and image\_height or some thing.

EDIT:

There is round of width to 32bit. (0 to 7)  $8 * 4$  (bpp).

I will try to round it of by 64bit.
