Ok added Odyssey and now Launch-Handler works as expected, but mailto links does not, and at the moment i can't find you old post.

For some reason there is no (no obvious way at least) handling of mailto: links in any of the MUI-OWB versions. This is a real weakness in the application.

IBrowse, old though it may be, has a section in the Preferences for the user to decide how mailto: links are handled, internally, externally or via OpenURL. There seems to be no equivalent setting for mailto: in Odyssey, clicking a mailto: link does absolutely nothing.

Does the MorphOS version allow the use of mailto: links ? If so maybe something broke in the conversion process ?
