This version seems pretty good, however i think to have found another little issue:

If you click with the left mouse button in order to open an external popup window (that contain an image) for example this one:

<http://www.amigans.net/modules/myalbum/photo.php?lid=276&cid=3>

The auto-resized image opened inside the window doesn't show the relative zoom cursor, zoom functionality works fine as you click into, but "zoom cursor" in this case will not be showed as expected ..

I think it's a little bug
