Making spreadsheets with google <https://docs.google.com/> doesn't work here with odyssey 1.23 upto r3. I was at a retro/amiga fair here in sweden and tried out 1.24 on a MorphOS machine. Worked as i could edit the cells. On my x1000 its all ghosted.

Is this something that works only under 1.24 or just fails under our uptodate 1.23. Can anyone try under morphos on 1.23 and 1.24 to confirm and also other OS4 users to see its not something i did wrong.
