Thore fixed all sidepanels issues for now, now and mouse wheel, and keys, and focus : all works.

@phantom

Ok, i got your screenshots on mail, will check it later. But in meantime you may try to play with preferred languages (to see if it make any difference). I.e. use only one , use first one that one, and then that one. If there will be differences, then its can be related to accepted-language header as it have priority of languages now.
